

Thelin Hearth Products' Award Winning Tiburon Pellet Stove Solar Adaptable

Thelin Hearth Products' Tiburon Pellet Stove has been engineered and developed to be Solar Adaptable for "off the grid" operation.

SACRAMENTO, CA — October 1, 2010 — Thelin Hearth Products has engineered and developed the award winning Tiburon Pellet Stove to run off solar power. Being the only stove on the market that comes equipped with a 12volt battery that automatically keeps the stove running during a power outage, the Tiburon is also able to adapt this technology to run completely off the grid with the addition of a small solar panel.

Originally introduced at the Orlando Florida HPBExpo in March, the Tiburon was selected to be the 2010 recipient of the prestigious "Vesta Award" for design and innovation by professionals in the hearth industry. Since receiving the award Thelin has lab tested the Tiburon and made many additional product enhancements to the final production model. These enhancements have resulted in the stove being EPA certified at 79% efficiency with a low emission of 2.48 g/hr. Additionally, with

the trickle charge battery backup system the Tiburon is also solar panel adaptable. Thelin Hearth Products has developed the Tiburon in response to growing demand for heating appliances that can operate during longer power outages. Using only 27 watts of power, the Tiburon is so efficient that it will run for a week or more with a properly sized battery. Designed to use such little power even at that highest setting, makes the Tiburon approximately 10 times more efficient than most other pellet stoves. Additionally, when power is restored the trickle charge battery backup system will recharge the auxiliary battery as well as the internal battery.

The Tiburon's onboard microprocessor is adaptable to a wide variety of applications and unlike other computer-controlled pellet stoves; you have the freedom to run the Tiburon using a battery, a solar panel or a generator. With this sophisticated DC control technology you are able to harness the power of the sun and run completely off the grid. With a small solar panel and battery backup system, operating costs are minimal. Being EPA certi-

fied and solar panel adaptable, the Tiburon is truly environmentally friendly. Tiburon - Availability The Tiburon is completely manufactured in California and shipped throughout Thelin Hearth Products dealer network in the United States, Canada, New Zealand, and Europe. The

Tiburon Pellet Stove is currently being displayed at many of these dealers. The Tiburon is in full production for the foreseeable future.

Founded in 1978 Thelin Co has been manufacturing quality pellet, gas, wood burning stoves and inserts. Tim Rice, who acquired Thelin Hearth Products in August 2009, has added to the classic line of Thelin product with the introduction of the 'Tiburon', a contemporary stove line.
